

uniCOS CORE

Clear video, easy setup, better hybrid meetings

Enhancing visibility, equity & engagement in hybrid meetings

uniCOS CORE is the newest addition to Televic's uniCOS multimedia family, designed specifically for meetings where, next to great audio, it's important to see and be seen (e.g. corporate meeting spaces). It is a cost-effective, all-in-one video conferencing solution that enables **Teams & Zoom integration** with multi-stream video for active speakers, and meeting equity for both in-person and remote participants.

With a **minimalistic interface**, an **easy setup**, and a **built-in high-resolution camera**, uniCOS CORE eliminates line of sight issues, making hybrid collaboration more intuitive and effective.

👁 Solves line of sight challenges

One of the biggest obstacles in hybrid meeting spaces is ensuring both in-room and remote participants can see and be seen clearly. uniCOS CORE solves this by providing:

- + An integrated **high-resolution camera**, **built-in microphone**, and **onboard loudspeaker**
- + **Bi-directional visibility**, meaning:
 - + Remote participants see in-room participants clearly
 - + In-room participants see remote attendees up close on their personal screens

Participant to screen

Camera to participant

🗨 Multi-stream video for active speakers

uniCOS CORE supports, in combination with the Confero Video Configurator, multiple video streams, allowing smooth, automatic switching between active speakers without requiring manual adjustments.

👤 User-friendly and minimalistic design

The intuitive 10-inch tiltable display ensures an optimal viewing angle while offering simple touch controls for smooth meeting interactions.

📄 Instant content sharing

- + Share documents and presentations effortlessly by connecting a laptop via **HDMI** to a Televic video injection box
- + A **one-button push** allows instant content sharing with all participants

🔌 Easy setup for corporate meeting rooms

- + Pre-packaged solution with a **built-in camera**, **display**, **microphone**, and **speaker**
- + No complex configurations — **simply connect, power on, and start your meeting**

How does uniCOS CORE compare?
